

FUEL PUMP SILENT MOUNT KIT

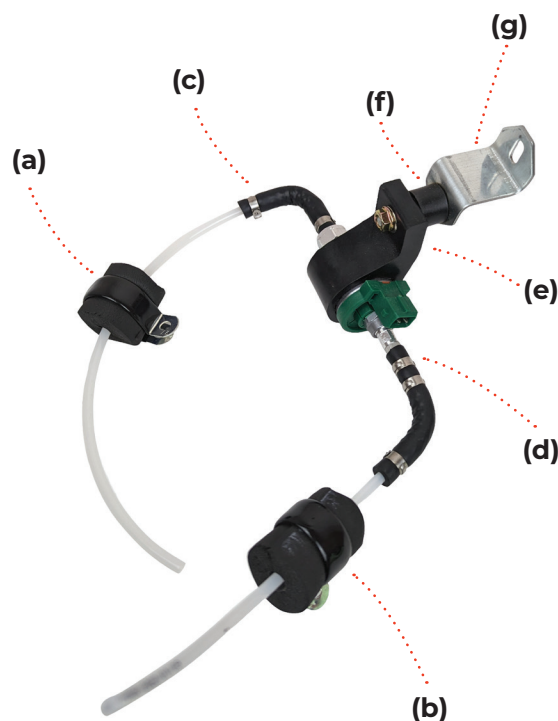

INSTALLATION

Please install your fuel pump in accordance with these instructions to ensure the ticking noise is minimised in your RV.

Note: One of the supplied elbows has a smaller end for the Belief fuel pump outlet. Ensure the elbow end marked 3.6mm goes on the fuel pump outlet.

Contents of the kit:

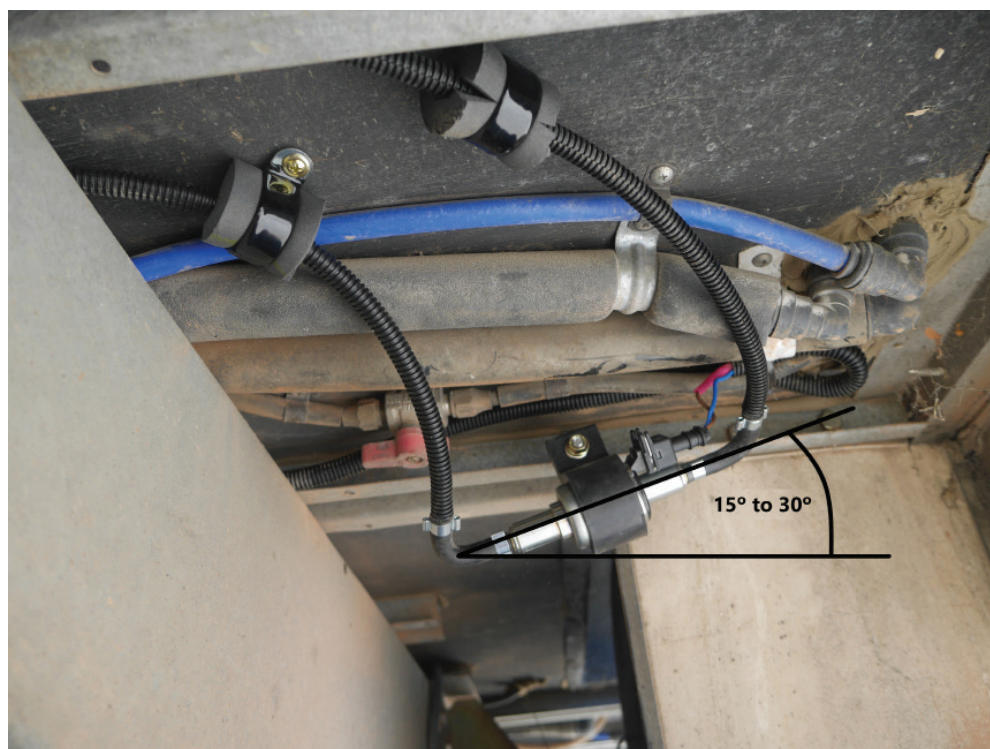

- 2x foam fuel line insulators (a).
- 2x 26mm P clamps (b).
- 2x fuel rubber elbows (c).
- 4x clamps (d).
- 1x bobbin mount with two flange nuts (f).
- 1x rubber pump mount (e).
- 1x Mounting bracket (g).

Failure to use all the supplied parts as suggested will result in less noise reduction.

Assemble the kit as shown in the picture.

For selecting an installation spot under the floor look for a place away from the beds preferably under a big structure to help absorb the vibrations, such as the fridge. Knock with your knuckles to find the spot that has the least resonance and mount the pump to this.
